

Docket No. 4175

METHOD AND SYSTEM
FOR MANAGING BLOOD PRODUCTS

Abstract of the Disclosure

5 A method and system for managing blood
products and tracking their movement between a
central blood test facility and a plurality of
hospitals in which a database is provided for
entering information pertaining to each patient,
including but not limited to entering blood type
information for a blood specimen from each patient,
10 recording blood type for each blood product assigned
to each patient and recording the results of remote
cross-matching of each of the patient specimens and
blood products to indicate their compatibility.
